

### SECURITY PROTECTION

#### SMOKE

**Protection smoke** is designed to work with a standard alarm system. As soon as the intruder breaks in, the alarm is activated and the smoke starts to appear. The aim is to fill the area with a dense smoke, which disorientates the intruder until the Police and/or Key Holders arrive.

**A thief is unable to steal what they cannot see,  
Smokecloak is an effective deterrent to theft.**

The Smoke Security Device is a powerful artificial fog generator. Our preferred system, the Smokecloak brand, is constructed to work seamlessly together with existing alarm installations. Security Smoke Systems can be used in different environments to protect sensitive areas, for example high value goods, drug storage, confidential records.

Security Smoke Systems produce a vapour that is harmless to humans, animals and property and is used in thousands of sites in the United Kingdom and around the world. The smoke vapour is made using pharmaceutical / food grade glycols found in such common products as toothpaste, deodorants and wines.

On activation a Smokecloak unit will fill the protected area with a vapour cloud until visibility is reduced to approx 30 centimetres. If the density should drop for any reason the cloak sensor will sense this drop and will reactivate the Smokecloak unit, continuing to protect your property, until authorised personnel switch off the alarm.

FOR A DEMONSTRATION OF THE SPEED AND EFFECTIVENESS GO TO THE SECURITY SMOKE PAGE ON THE CDI SERVICES WEBSITE [www.cdiservices.co.uk](http://www.cdiservices.co.uk)

**CDI Services** is a member of the SSAIB (Security Systems & Alarm Inspection Board), with UKAS accreditation

We are listed on the Metropolitan, Essex and Hertfordshire Police approved installer's lists.

**CDI Services** are able to install and maintain systems requiring POLICE response.

Providing bespoke solutions for the **C**ommercial, **D**omestic and **I**ndustrial market is our speciality.

This type of glycol vapour smoke can be pumped into a room via the generation unit or by ductwork making it the most versatile product available.

Due to the interconnection of the Smokecloak system with the intruder alarm, no additional user intervention is required to arm and disarm the Smokecloak system. This also provided the additional assurance that, once the intruder alarm has been unset, the unit will not trigger while the premises is occupied.

Most insurance companies offer additional discounts on premiums or excess when protection smoke is installed. For additional peace of mind indemnity insurance is also offered with this product.
